Internship Report
on
Salesforce Administrator Virtual Internship

An internship report submitted to

Jawaharlal Nehru Technological University Anantapur

In partial fulfillment of the requirements for the award of the degree of

BACHELOR OF TECHNOLOGY
IN
COMPUTER SCIENCE AND SYSTEMS ENGINEERING

Submitted by

Mudiyam Nikhilesh Krishna
21121A3736
III B. Tech I Semester

Under the esteemed supervision of
Ms. K. Pujitha
Assistant Professor

Department of Computer Science and Systems Engineering

DEPARTMENT OF COMPUTER SCIENCE AND SYSTEMS ENGINEERING

ABSTRACT

The Security Specialist Superbadge is an all-inclusive program that equips Salesforce administrators with the necessary skills to protect their organizations from ever-changing cyber threats. This comprehensive superbadge delves into Identity and Access Management (IAM), placing emphasis on user provisioning, authentication options, authorization models, and access control methods. The program also focuses on data security, covering topics like encryption, data loss prevention, and data masking techniques to safeguard sensitive information. In addition, it delves into threat detection and prevention tactics, including security monitoring, vulnerability assessments, and intrusion detection systems.

The User Authentication Specialist Superbadge is an immersion into the essential significance of user authentication within Salesforce's security measures. It delves into the nuances of username and password authentication, such as password complexity requirements and secure reset procedures. Additionally, the integration of Single Sign-On (SSO) is explored, enabling users to access Salesforce using credentials from other trusted systems. A further layer of security is also covered through Multi-Factor Authentication (MFA), and administrators are guided on how to seamlessly integrate external Identity Providers (IdPs) for authentication.

The Lightning Experience Reports & Dashboards Specialist Superbadge empowers Salesforce administrators with the expertise to effectively create and oversee reports and dashboards. This comprehensive program teaches the fundamentals of reporting, from report types to fields and establishing object relationships. It also delves into the advanced functionalities of report filters and cross filters, crucial for honing in on specific data subsets. By successfully completing this superbadge, administrators showcase their mastery in utilizing Lightning Experience to extract valuable insights from

Module 1

INTRODUCTION

1.Introduction to Salesforce

Salesforce CRM provides a complete solution for that includes feature-rich solutions for marketing, sales, services, partner management and community management .CRM is originally software for managing customer interaction, such as scheduling tasks, emailing, texting, and many more.

Salesforce does not offer a specific product or software called “Salesforce PPT.” Salesforce is primarily known for its customer relationship management (CRM) platform and related cloud-based products for sales, service, marketing, and other business functions. Talking about HR systems, every company across the globe has an HR team. Each HR team would require an HR application to store employee records. Almost all specifications for such an application would be common for all companies. So, as a developer, it would be very easy to create a salesforce application for such specifications, post it onto the cloud, and provide it as a service to multiple clients at the same time. Maintenance of the same can be done altogether too. So basically, the problem of scalability gets eliminated.

Fig 1.1 : Salesforce CRM

A CRM system allows businesses to manage customer and prospect

Downloaded by Harsh Kumar (harshk0728@gmail.com)

relationships with data. You can store, track, and analyze customer and prospect information in one central location, including contact and account information, sales opportunities, service cases, and marketing campaigns.

This document is available free of charge on studocu

Downloaded by Harsh Kumar (harshk0728@gmail.com)

1.1 Description of the Company

Salesforce, Inc. is an American cloud-based software company headquartered in San Francisco, California. It provides customer relationship management (CRM) software and applications focused on sales, customer service, marketing automation, analytics, and application development.

Founded by former Oracle executive Marc Benioff, Salesforce quickly grew into one of the largest companies in the world, making its IPO in 2004. Salesforce's continued growth makes it into the first cloud computing company to reach US$1 billion in annual revenue by fiscal year 2009, and the world's largest enterprise software firm by 2022.

Trailhead and the Trailblazer Community are integrated into a single platform. The Trailblazer Community assists me in learning new skills and connecting with other Trailblazers. Trailhead and the Trailblazer Community serve as my one-stop shop for learning, earning, and connecting from anywhere. Trailhead has something for everyone, whether you're a new admin, a recent college graduate, a Salesforce user, or simply someone who enjoys learning.

Fig: 1.2 Trailhead platform

Downloaded by Harsh Kumar (harshk0728@gmail.com)

1.2 Overview of Project Salesforce ORG

Customize the salesforce Platform

The Salesforce platform is used to develop custom objects and functionality specific to your business. We can do most of this development without ever writing a line of code. Developing without code is known as no-code (or declarative) development. With no- code development, we use forms and drag-and-drop tools to perform powerful customization tasks. The platform also offers programmatic development, which uses things like Lightning components. But if you're not a programmer, you can still build some amazing things on the platform. Let's see how to create a salesforce platform

1. From the gear icon, click Setup to launch the setup page.
2. Click the Object Manager tab.
3. Click Contact.
4. In the Details panel, click Fields & Relationships, and then click New.
5. A data type indicates what kind of information your field holds. For this field, pick Checkbox and click Next.
6. The Field Label is what you see on the Contact page. Enter Prequalified? and click Next.
7. Click Next again to accept the default field-level security.
8. Check the checkbox to add the new field to all the Contact Page Layouts and then click Save.

Downloaded by Harsh Kumar (harshk0728@gmail.com)

1.3 DATA SECURITY

Data security is a critical aspect of information technology and business operations, involving the protection of sensitive data from unauthorized access, disclosure, alteration, and destruction. Robust data security measures are essential to safeguard the confidentiality, integrity, and availability of data.

- **Authentication**: Ensures that users and entities are who they claim to be before granting access. Common methods include passwords, multi-factor authentication (MFA), and biometrics.
- **Authorization:** Controls access rights and permissions based on user roles, ensuring that individuals can only access the data and resources necessary for their responsibilities.
- **Data Encryption:** Converts sensitive information into unreadable code, which can only be decrypted by authorized parties with the appropriate keys. This is crucial for protecting data during transmission and storage.

Control Access to the Org

When you ensure that only employees who meet certain criteria can log in to Salesforce, you're protecting your data at the broadest level. You do this by managing authorized users, setting password policies, and limiting when and where users can log in.

Create a User

You can create users—even multiple users—in just a few clicks. It's as simple as entering a username, alias, and email, and selecting a role, license, and profile. Many more options are available, of course, but that's all you need to get started.

Salesforce auto-generates a password and notifies new users immediately. Users can change or add to their own personal information after they log in.

Downloaded by Harsh Kumar (harshk0728@gmail.com)

STEPS:

1. From Setup, in the Quick Find box, enter Users, and then select Users.
2. Click New User. Or you can click Add Multiple Users to add up to ten users at a time.
3. Enter the user's name, email address, and a unique username in the form of an email address. By default, the username is the same as the email address.
4. Select the user license this user will have. The license determines which profiles are available for each user.
5. Select a profile, which specifies the user's minimum permissions and access settings.
6. Select the option to generate a new password and notify the user, then save.

Deactivate a User

You can't delete a user, but you can deactivate an account so a user can't log in. Deactivated users lose access to all records. (That includes records that are shared with them individually and records shared with them as team members.) However, you can still transfer this data to other users and view the names on the Users page.

1. From Setup, in the Quick Find box, enter Users, and then select Users
2. Click Edit next to the name of the user you want to deactivate.
3. Clear the Active checkbox and click Save. If you can't immediately deactivate an account (for example, when the user is selected in a custom hierarchy field), you can freeze their account. That prevents the user from logging in to your organization while you're working on deactivating them.
   - On the Users page in Setup, click the username of the user whose account you want to freeze.
   - Click Freeze.

This document is available free of charge on studocu

Downloaded by Harsh Kumar (harshk0728@gmail.com)

Restrict Login Access by Time

For each profile, you can specify the hours when users can log in. For example, if you decide your call center employees really only need to look at customer data while they're taking phone calls nine to five, you can make it so they can't log in during evenings and weekends.

1. From Setup, in the Quick Find box, enter Profiles, and then select Profiles.
2. Click the profile you want to change.
3. Under Login Hours, click Edit.
4. Set the days and hours when users with this profile can log in to the organization.
5. To allow users to log in at any time, click Clear all times.
6. To prohibit users from using the system on a specific day, set the start and end times to the same value

Downloaded by Harsh Kumar (harshk0728@gmail.com)

1.4 LIGHTNING APP BUILDER

Lightning App Builder is a visual development tool provided by Salesforce that allows users to design and customize the user interface of their Salesforce applications without the need for extensive coding. It is part of the Lightning Experience, Salesforce's modern and user-friendly interface.

Lightning App Builder lets developers and business users build beautiful custom user interfaces that are designed to work perfectly on your desktop and mobile devices, all without writing a single line of code. In this Quick Start, you'll build a geolocation app for sales reps in the field using the Lightning App Builder. You'll use a pre-built Lightning Component and the drag-and-drop interface of Lightning App Builder to create this app.

Create Your First Page

A Lightning Page is a container for Lightning Components. Create your first page and add a component to it.

If you haven’t already, log in to Trailhead, then launch your Trailhead Playground by clicking Launch at the bottom of this page. This opens your Trailhead Playground in a new tab.

1. If you're not already on the Setup home page, click Gear icon to access Setup in Lightning Experience. and select Setup to launch Setup in a new tab.
2. Enter Lightning App Builder in Quick Find and select Lightning App Builder.
3. Under Lightning Pages, click New.
4. Select App Page then click Next.
5. In the Label field, type Field Sales App and click Next.
6. In Create a New Lightning Page, select Two Regions.
7. Click Done.

This document is available free of charge on studocu

Downloaded by Harsh Kumar (harshk0728@gmail.com)

For your first component, drag a List View component onto the page.

1. In the Desktop drop-down list, click Tablet - Portrait. The canvas's preview layout changes from the standard single column to two columns.
2. From the Standard Components menu on the left, drag the List View to the left column.
3. Set the properties of this component using the Properties list in the right sidebar.
   - In the Object drop-down list, select Account.
   - In the Filter drop-down list, select My Accounts.
   - In the Number of Records to Display field, enter 7.
4. Click Save and Not yet option to activate the Page

Downloaded by Harsh Kumar (harshk0728@gmail.com)

1.5 Salesforce Marketing Cloud

Marketing Cloud is used by almost all companies for marketing purposes. In this Sales Market Cloud, you can send customized mass mailers to thousands of potential customers at just a single click. You can also target some content on social media using advertisements. This can be used to boost your sales numbers.

There are many ways how an optimal marketing strategy should be. But from those companies that failed badly in marketing, one thing is clear. Deluging mistargeted ads to customers is clearly not the way to go. If you're an avid online user, you might definitely have encountered such ads in your mailbox.

If you are into marketing, with Salesforce Marketing Cloud, you can make your marketing team smarter and be more predictive about each customer. You'll get an intelligent platform integrating marketing, sales, service, and commerce that will make for a collaborative CRM, equipped with tools and data to make recommendations based on past purchases.

Fig: 1.4 Marketing Cloud

This document is available free of charge on studocu

Downloaded by Harsh Kumar (harshk0728@gmail.com)

This is also helpful in solving issues your customers might have with certain products. You can increase engagement through custom communities (as specified in the subsequent section below) and connect to your customers through any device on any channel from social media. Gathering key insights into strengthening your relationship with each customer at every stage will be made easy with Salesforce Marketing Cloud. Easily adjustable campaigns to help drive leads in the pipeline while you get a complete view of the customer data to optimize your marketing strategy, all is possible with Salesforce's marketing facility

1.6 Salesforce Service Cloud

Using Salesforce, support agents can address customer problems with the right tools. Building self-service communities give your customers the ability to solve their issues on their own terms.

As a service owner, customer opinions ought to be your top concern. Every share, like, heart, or recommendation makes a big difference, and if they're happy you're happy too. As a service business owner, you should know all the issues of your customers and the customer history and then should provide one-on-one service, accordingly.

Downloaded by Harsh Kumar (harshk0728@gmail.com)

Fig: 1.5 Service Cloud

This makes you smarter and better able to discuss the details of each sale and case history. You should also be able to put forward marketing messages that tweak the interest of your customers. When you are better able to connect to the technicians on the field, it becomes easier for you to make them more productive. All this is possible with Salesforce Service Cloud.

1.7 Salesforce Architecture

This document is available free of charge on studocu

Downloaded by Harsh Kumar (harshk0728@gmail.com)

Fig: 1.6 Salesforce Architecture

The architecture of Salesforce can be divided into various components described as follows:

Trusted multitenant Cloud

In this component, multiple instances of one or more application operate separately in a shared environment. The instances are known as tenants which separate from each other. Although, there are physically remain in the same hardware. It is called trusted as it offers a high level of security

Scalable Metadata Platform

This component helps you to customizations. It also allows you to increase the amount of data or concurrent user instances.

Enterprise Ecosystem

The enterprise Ecosystem of Salesforce is quite big as many partners contribute by creating and maintaining in this platform.

APIs

Salesforce offers a powerful suite of APIs to develop the Mobile App.

Salesforce as SaaS (Software as a Service): No installations, setup or download

required. Just Log in and use software across the Cloud

Downloaded by Harsh Kumar (harshk0728@gmail.com)

Module 2
SECURITY SPECIALIST SUPERBADGE

2.0 Security Specialist Superbadge

The Security Specialist Superbadge is a Salesforce credential composed of three superbadges.

- Security Governance Specialist Superbadge
- User Access Specialist Superbadge

2.1 Security Governance Specialist Superbadge

The Security Governance Specialist Superbadge is a Salesforce credential made up of two superbadge units.

1. Authentication Governance Superbadge Unit
2. Access Governance Superbadge Unit

1. Authentication Governance Superbadge Unit:

To earn the Security Specialist Superbadge, you'll demonstrate your proficiency in monitoring and enhancing user authentication. You'll conduct thorough audits of single sign-on (SSO) and multi-factor authentication (MFA) users, ensuring compliance and security. You'll build comprehensive authentication monitoring reports and dashboards, providing valuable insights into user activity and potential risks. You'll customize a flow with a concurrent sessions email action, proactively alerting users of suspicious activity and preventing unauthorized access. By implementing these measures, you'll safeguard your Salesforce organization and maintain a high level of security.

This document is available free of charge on studocu

Downloaded by Harsh Kumar (harshk0728@gmail.com)

2. Access Governance Superbadge Unit:

To earn the Security Specialist Superbadge, you'll delve into the realm of privileged user management, data protection, and connected app access monitoring. You'll conduct thorough audits of privileged users, evaluating their access levels and adjusting permissions as needed to ensure the principle of least privilege. You'll vigilantly monitor changes to key data, promptly identifying and mitigating any potential exposure of sensitive information. You'll articulate best practices in monitoring connected app access, ensuring that only authorized apps have access to Salesforce data. By implementing these measures, you'll safeguard your Salesforce organization from unauthorized access and data breaches.

2.2 User Access Specialist Superbadge

The User Access Specialist Superbadge is a Salesforce credential made up of three superbadge units.

1. User Access Fundamentals Superbadge Unit
2. Extended User Access and Restriction Superbadge Unit
3. User Access Troubleshooting Superbadge Unit

1.User Access Fundamentals Superbadge Unit:

To earn the Security Specialist Superbadge, you'll embark on a journey to master Salesforce's sophisticated permission management system. You'll establish record access through organization-wide defaults, ensuring a consistent security baseline across your Salesforce org. You'll create and modify profiles, carefully defining the access levels for different user groups. You'll manage access to standard and custom objects, granting users appropriate permissions to view, edit, or delete data. You'll create permission sets and permission set groups, enabling granular control over user access and streamlining permission assignments. By mastering these concepts, you'll become an expert in safeguarding Salesforce data and maintaining user access.

Downloaded by Harsh Kumar (harshk0728@gmail.com)

2.Extended User Access and Restriction Superbadge Unit:

To earn the Security Specialist Superbadge, you'll delve into the depths of Salesforce's robust sharing model. You'll fine-tune organization-wide sharing settings, establishing a balance between data visibility and security. You'll create roles and implement hierarchical sharing, leveraging the organizational structure to control record access. You'll construct owner-based and criteria-based sharing rules, granting users access to specific records based on predefined criteria. You'll employ restriction rules to filter record access based on user profiles, ensuring that only authorized users can view sensitive data. By mastering these techniques, you'll become an expert in managing Salesforce data sharing and safeguarding your organization's information.

3.User Access Troubleshooting Superbadge Unit:

To earn the Security Specialist Superbadge, you'll demonstrate your expertise in managing user access and preventing data leaks. You'll skillfully adjust access levels using profiles and permission sets, ensuring that users have only the necessary permissions to perform their tasks. You'll proactively identify and rectify unintended sharing, safeguarding sensitive information from unauthorized access. You'll configure visibility updates based on your organization's specific requirements, maintaining data integrity and compliance. You'll adhere strictly to company standards and policies, ensuring that your actions align with the organization's security framework.

This document is available free of charge on studocu

Downloaded by Harsh Kumar (harshk0728@gmail.com)

Downloaded by Harsh Kumar (harshk0728@gmail.com)

Module 3

USER AUTHENTICATION SPECIALIST SUPERBADGE

3.0 User Authentication Specialist Superbadge

The User Authentication Specialist Superbadge is a Salesforce credential composed of three superbadge units.

1. User Authentication Settings Superbadge Unit
2. Multi-Factor Authentication and Single Sign-On Settings Superbadge Unit
3. User Authentication Troubleshooting Superbadge Unit

3.1 User Authentication Settings Superbadge Unit:

- Set appropriate password policies: Enforce strong password requirements, such as minimum length, complexity, and regular changes.
- Configure login requirements and limits: Implement login history tracking, lockout mechanisms for failed login attempts, and restrictions on logins from suspicious IP addresses.
- Control API access for connected apps: Grant access only to trusted apps, employ OAuth authentication for secure communication, and closely monitor API usage patterns.
- Set trusted IP addresses for users: Restrict logins to authorized IP addresses, utilize VPNs for secure remote connections, and employ IP whitelisting for sensitive data access.

3.2 Multi-Factor Authentication and Single Sign-on Settings Super badge Unit:

This document is available free of charge on studocu

Downloaded by Harsh Kumar (harshk0728@gmail.com)

To earn the Security Specialist Superbadge, you'll delve into the realm of enhanced authentication mechanisms, ensuring robust protection against unauthorized access.

You'll configure single sign-on (SSO) settings to streamline user authentication and eliminate the need for multiple logins. You'll implement multi-factor authentication (MFA) as an additional layer of security beyond passwords. You'll enable Lightning Login, a streamlined authentication experience that simplifies user access while maintaining security. You'll thoroughly test your configurations with the Salesforce Authenticator app to ensure seamless integration and optimal security.

3.3 User Authentication Troubleshooting Superbadge Unit:

To earn the Security Specialist Superbadge, you'll demonstrate your ability to handle various security-related scenarios. You'll assist a new user in connecting to the Salesforce Authenticator app, ensuring smooth onboarding. You'll troubleshoot single sign-on configuration issues, maintaining seamless user access. You'll take swift security precautions if a user's phone is stolen, safeguarding the Salesforce organization. By effectively managing these situations, you'll showcase your expertise in Salesforce security.

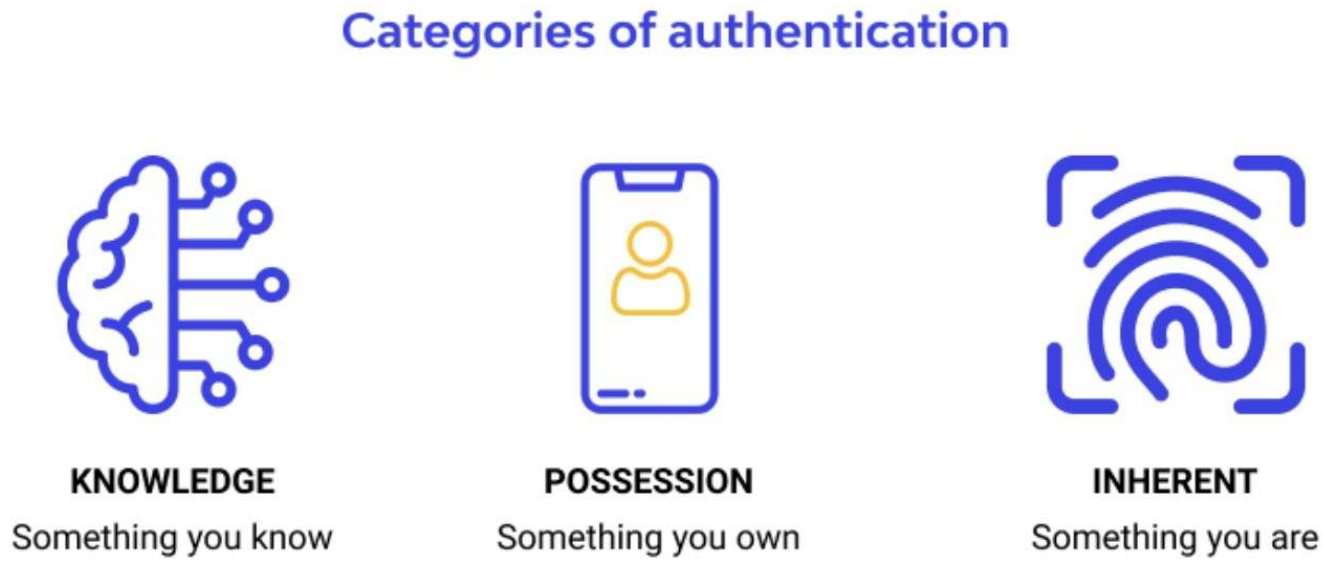

Fig: 2 Identity Verification

Downloaded by Harsh Kumar (harshk0728@gmail.com)

Module 4
LIGHTNING EXPERIENCE REPORTS & DASHBOARDS SPECIALIST

4.0 Lightning Experience Reports & Dashboards Specialist

The Lightning Experience Reports & Dashboards Specialist Superbadge is a Salesforce credential that validates your proficiency in creating, managing, and utilizing reports and dashboards in Salesforce Lightning Experience. By earning this Superbadge, you demonstrate your ability to extract meaningful insights from Salesforce data, present them in a visually appealing and understandable format, and empower users to make data-driven decisions.

Skills Required for a Lightning Experience Reports & Dashboards Specialist

- To excel as a Lightning Experience Reports & Dashboards Specialist, you should possess a blend of technical and analytical skills.
- Thorough understanding of Salesforce data models: You must have a deep understanding of Salesforce data structures, relationships between objects, and the Salesforce reporting language (SOQL).
- Proficiency in Salesforce report builder: You should be proficient in using the Salesforce report builder to create reports, apply filters, and utilize conditional formulas.
- Experience with Salesforce dashboard components: You must be familiar with various dashboard components, their functionalities, and how to arrange them effectively.
- Data analysis and visualization skills: You should possess the ability to analyze data, identify patterns, and translate insights into visually compelling charts and graphs.

This document is available free of charge on studocu

Downloaded by Harsh Kumar (harshk0728@gmail.com)

- Strong communication and collaboration skills: You must be able to effectively communicate complex data insights to non-technical users and collaborate with stakeholders to understand their reporting needs.

Benefits of Earning the Lightning Experience Reports & Dashboards Specialist Superbadge

- Earning the Lightning Experience Reports & Dashboards Specialist Superbadge offers several benefits, including:
- Recognition of your expertise: The Superbadge serves as a valuable credential, validating your skills and knowledge in Salesforce reporting and dashboarding.
- Enhanced career opportunities: The Superbadge can open doors to new career opportunities, positioning you for promotions and advancement.
- Increased contribution to your organization: Your ability to create and manage reports and dashboards can significantly enhance your organization's data-driven decision-making capabilities.

Administer report and dashboard visibility and access

To ensure that only authorized users have access to sensitive data, you'll learn to create and manage report and dashboard folders, set report and dashboard sharing permissions, and grant or revoke access to reports and dashboards. This involves understanding Salesforce's sharing model and utilizing its features effectively.

Apply report types and fields

You'll gain proficiency in creating custom report types to cater to specific reporting needs and data structures. This includes adding and

Downloaded by Harsh Kumar (harshk0728@gmail.com)

removing fields to reports, utilizing filters and conditional formulas to refine reports, and understanding the different types of record filters and their impact on data presentation.

Design a record filtering strategy

Effective filtering is crucial for narrowing down report results and focusing on relevant data. You'll learn to create effective record filters based on specific criteria, employ dynamic filters to filter reports based on real-time data or user input, and combine multiple filters to create sophisticated filtering strategies.

Create and surface report charts and dashboards

Data visualization is essential for communicating insights effectively. You'll master creating a variety of chart types, including bar charts, line charts, and pie charts, formatting charts to make them visually appealing and easy to understand, and strategically placing charts and reports on dashboards to provide users with key insights.

Apply buckets, groups, and custom summary formulas

Data summarization helps in understanding trends and patterns. You'll learn to use buckets to group data into meaningful categories, create groups to analyze data at different levels of detail, and develop custom summary formulas to calculate complex metrics.

Create dashboard components

Dashboards provide a centralized view of key information. You'll learn to add and remove components to dashboards, configure component properties to customize their appearance and behavior, and use filters and conditional formatting to personalize dashboards for specific users

The Lightning Experience Reports & Dashboards Specialist Superbadge is a valuable credential that demonstrates your expertise in a critical area of Salesforce data management. By earning this Superbadge,

This document is available free of charge on studocu

Downloaded by Harsh Kumar (harshk0728@gmail.com)

you position yourself as a data-driven professional.

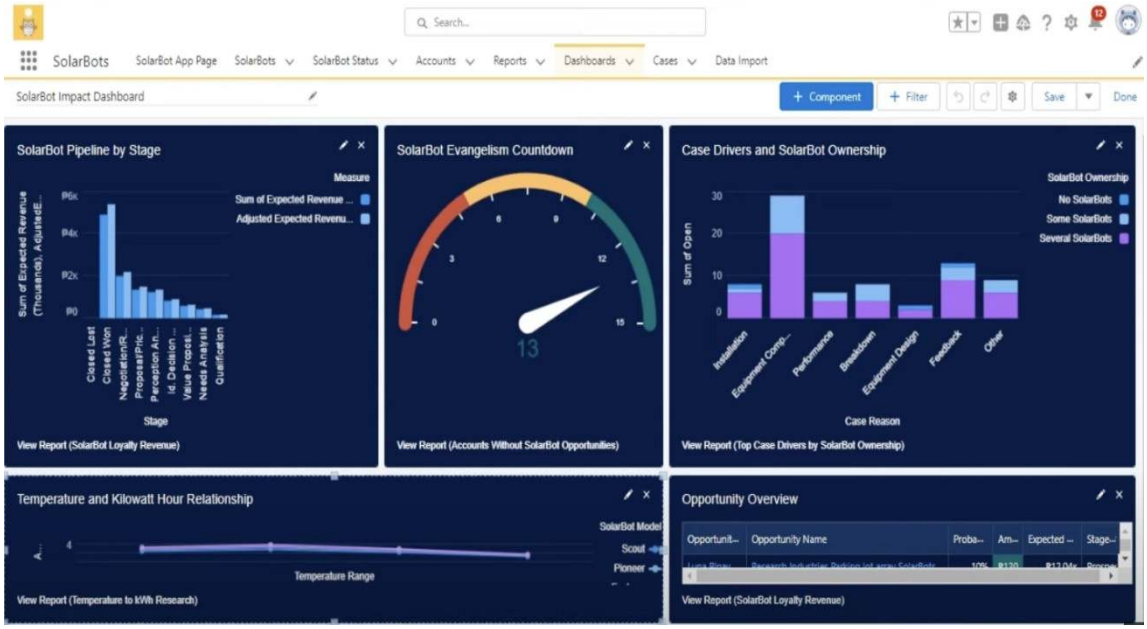

Fig : 3 Lightning Experience Dashboard

Downloaded by Harsh Kumar (harshk0728@gmail.com)

Module 5

SUPER BADGES

5.0 SUPER BADGES

My typical day would consist of completing milestones and exploring challenges in the trail head platform, which includes watching and learning from trainers via video sessions, step-by-step tutorials that explain the process of creating applications and deploying them.

The trailhead modules are designed so that there is a lab after each video session; this way, when I read about a new topic, I can implement it in real time via virtual labs. This resulted in an easy-to-understand salesforce method. There are many badges and points for each activity and milestone to make it even more tough and enjoyable.

Each medal may be obtained by completing a specific challenge in each module. This pushed me to collect additional badges and points, which I may use to demonstrate recruiters my talents through digital badges.

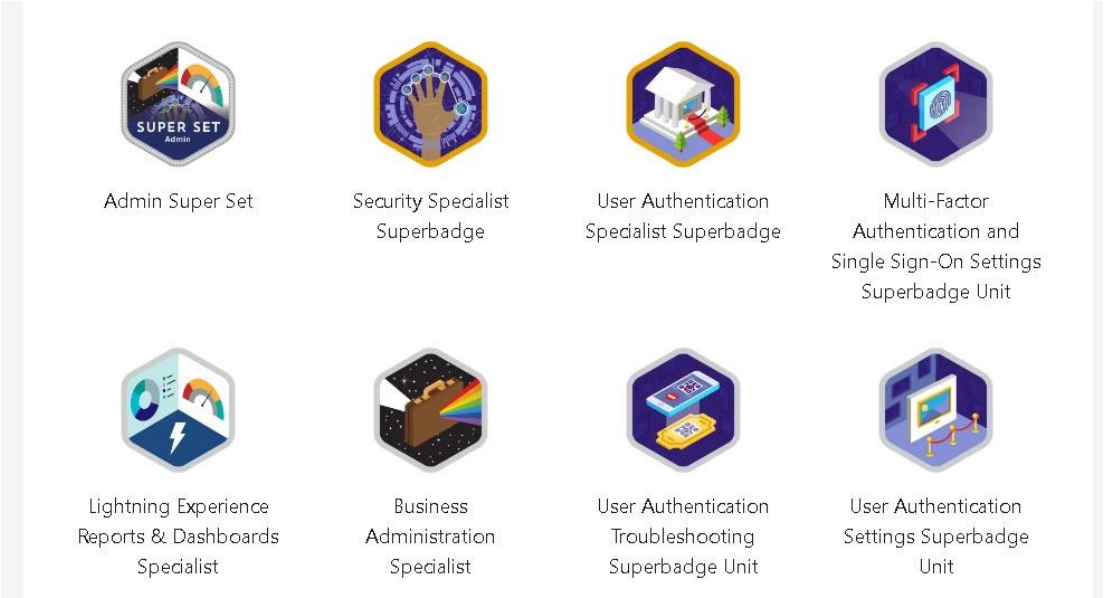

Fig: 4 Super badges

This document is available free of charge on studocu

Downloaded by Harsh Kumar (harshk0728@gmail.com)

The Admin Super Set is a collection of three superbadges offered by Salesforce that validate your expertise in securing Salesforce data and applications. This superset is designed for Salesforce administrators, developers, and security professionals who want to demonstrate their proficiency in protecting Salesforce environments from unauthorized access and other threats.

To earn the Admin Super Set, you must complete the following three superbadges:

Salesforce Security Specialist Superbadge

This superbadge covers the fundamentals of Salesforce security, including Salesforce security concepts, user permissions and access, data protection, login security, and Apex security.

Salesforce Identity and Access Management Superbadge

This superbadge delves deeper into identity and access management (IAM) concepts, such as user authentication, single sign-on (SSO), multi-factor authentication (MFA), and role-based access control (RBAC).

Salesforce Data Protection Specialist Superbadge

This superbadge focuses on data protection strategies, including encryption, data masking, data classification, and data loss prevention (DLP).

Finally, through creating services and apps during my internship, I obtained both theoretical and practical expertise. I also like to thank Smart Internz for the simple onboarding and virtual learning process. Throughout the internship, Smart Internz has taken a personal interest in my learning process. Personal mentors have advised and updated me on each module I finished.

Downloaded by Harsh Kumar (harshk0728@gmail.com)

CONCLUSION

By successfully completing the three superbadge units, aspiring security professionals gain in-depth knowledge of user authentication mechanisms, security governance principles, and user access management strategies. This comprehensive understanding equips them to tackle the complexities of Salesforce security and make informed decisions to protect organizational data.The Security Specialist Superbadge delves into the intricacies of user authentication, emphasizing the importance of verifying user identities before granting access to sensitive data. Through hands-on exercises, individuals explore various authentication methods, including username and password combinations, single sign-on (SSO) integration, and multi-factor authentication (MFA) implementation.

The superbadge underscores the significance of security governance, establishing a framework for safeguarding Salesforce organizations. Participants gain insights into developing and implementing security policies, enforcing access controls, and implementing data encryption measures. They also learn to establish a comprehensive monitoring plan to proactively identify and address potential security threats.The Security Specialist Superbadge equips individuals with the skills to effectively manage user access within Salesforce environments. They learn to create new users, assign roles and permissions, and maintain user profiles, ensuring that access aligns with individual responsibilities. Additionally, they master the art of provisioning and de-provisioning user access, ensuring that access privileges remain relevant and aligned with current needs.

Earning the Security Specialist Superbadge is not merely an academic pursuit; it is a transformative journey that elevates individuals to the forefront of Salesforce security expertise. By mastering the superbadge's concepts, individuals demonstrate their commitment to data security, making them highly sought-after professionals in today's demanding job market.The Security Specialist Superbadge stands as a testament to an

individual's dedication to safeguarding Salesforce organizations. By earning this prestigious credential, individuals not only enhance their career prospects but also make a significant contribution to the overall security posture of their organizations. As the world increasingly relies on Salesforce for data management and business operations, the demand for security-focused professionals will continue to rise. The Security Specialist Superbadge empowers individuals to rise to this challenge, ensuring that Salesforce remains a trusted platform for organizations worldwide

When I started working on Security Governance Super badge, they asked me to complete the prerequisites like the Authentication Governance and Access Governance Units. In that modules I have learned how to protect my data by performing Axiom SSO tests which would send a request to the salesforce to protect the data.

Another aspect I would like to mention is regarding the Lightning Experience Reports and Dashboards Specialist Super Badge. Here I was asked to construct a new trailhead playground and was asked to install a package (04t1H0000018kE1) named Solar Bots App Page. Then they asked us to create six public teams namely Executive Team, Report and Dashboard Administrators, Research and Development Team, Sales, Leadership Team, Sales Team, Support Team and we should verify the Solar bot status.

Finally, In the Admin Super Set, an assessment was conducted to verify the progress of the previous super badges. In the Administrator Journey of Salesforce, I learned many things regarding the creation of lightning pages, cloud basics, data modelling, how to keep data secure and manage the data. I would like to thank Salesforce and Smart Internz for giving me this opportunity to work with them and help me upgrade my skills which would be useful for my career.
